

Sensor Activated flushometer

Quick Detail:

Name: Sensor Hands Free Automatic Electronic Toilet Flush Valve

Brand: KEXIN

Material: Brass 59-1

surface finished: Chrome

Inlet size: 1", outlet size: 1 1/2" (38mm)

Time Delay : About 4-8 Seconds.

Water pressure : at 25psi to 125psi

Application: Toilet

Type: Sensor and Push Button

The features of sensor flush valve:

1. When the product is maintained, we can close the stop valve
2. Self-cleaning piston with the small spring prevents clogging and reduces maintenance
3. About the sensor flush valve, the fully manual override allows valve to flush during a power failure

The advantage of sensor flush valve:

1. With a delay effect. This project has a delay effect button. After pressing the hand wheel button, the flow delay effect is sustainable, and the flow delay time can be set to achieve the effect of precise flow.
2. Sensing and manual accuracy. In this project, the amount of water manually pressed by the hand wheel button is close to the amount of water sensed.
3. Health. For use in public places, you can use sensing to avoid cross-infection.

4. The button feels good. After pressing the hand wheel button in this item, the valve core is controlled to float up and down by removing the water on the spool, so the switch can be opened with little force, without much effort.
